

DESCRIPTION

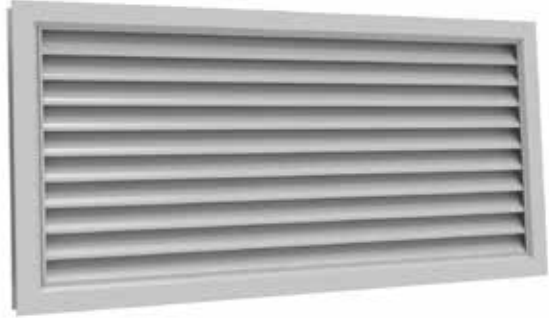

The DG door transfer grilles are designed for use in doors where constant air transfer with non-vision is required.

The DGC door transfer cavity grille are the most economical form of grilles for partitions, panels or sliding doors.

The DGC is manufactured as per the DG but in a channel frame. Core is installed and secured using timber beading or angles. Standard colour finish is silver.

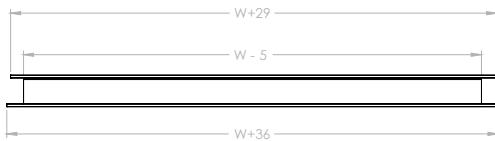

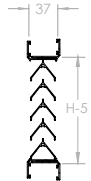

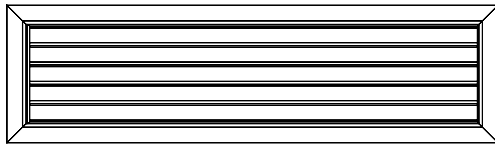

CONSTRUCTION

The DG is an all aluminium construction, complete with backing frame to suit door thicknesses of 33mm to 52mm. The core consists of chevron blades fixed to provide sight-proof characteristics. Standard finish is natural anodised.
